ABSTRACT OF THE DISCLOSURE

5 A backless, strapless breast form system to be worn in
place of a traditional bra having a pair of breast forms.
Each breast form includes a volume of silicone gel encased
between thermoplastic film material, and a concave interior
surface facing towards a user's breast having a pressure
10 sensitive adhesive layer for securing the breast form to the
user's breast. There is a connector having a first portion
secured to an inner side surface of one breast form and a
second portion secured to an inner side surface of the other
breast form, where the first portion and the second portion
15 are adapted to cooperatively engage, that adjoins the two
breast forms together.
